Visualization

Total cases VS Cases per million

New cases VS New cases per million

New deaths VS New deaths per million

France

Spain

India

India - New cases smoothed

India - New deaths smoothed

India - Stringency index

Peru

Peru - New cases smoothed

Peru - New deaths smoothed

Peru - Stringency index

United States

Conclusions

Strong restrictions (stringency index) had a **positive impact** in **France and Spain** since there were fewer infections and deaths.

Restrictions in **Peru, India** and **United States** had **no impact** in decreasing infections and deaths.

The **death ratio** (new cases vs deaths) was **higher** in the **first wave**.
